

# ACHIEVING MORE TOGETHER.

Overview of services.

## Our service for the entire lifecycle of your plants

# SUSTAINABILITY FOR A BETTER FUTURE.

There is nothing more constant than change. The chemical industry has to face up to this challenge. As a reliable and responsible partner, we give you our full support, offer a comprehensive service portfolio and provide the ideal conditions for greater sustainability in the field of chemical production. We deliver solid solutions that improve the efficiency and availability of your facilities, save energy and resources, and result in greater process safety and legal certainty so that you can continue to be successful in the future.

## WE DEVELOP YOU FURTHER.

**Special requirements call for first-class engineering: We provide comprehensive and competent support in developing your customized production plant. And we make sure that you fully comply with all legal requirements.**

### Engineering

Are your requirements unique? So is our engineering! Our speciality is customised facility engineering. This means we support you in developing production facilities in the “non-standard plant” category. We can use our previous experience as well as break new ground when needed, working forwards step by step together with you. You give us the licence, we give you the know-how.

## Authority management

Our many years of cooperation with clients in the process industry makes us very familiar with approval procedures. We're know all the processes and are completely up to date on legal requirements. Take advantage of our complete services in agency management – we know our way around the paperwork just as well as we do equipment and machines!

## WE REALIZE YOUR IDEAS.

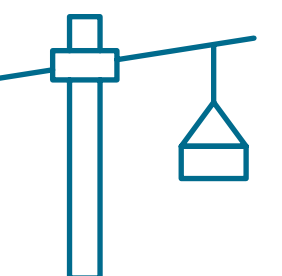

**Whether new construction, extension or conversion: we coordinate all trades, clarify open questions and monitor the necessary production measures. So that your visions become reality – exactly as you planned them.**

### Construction

Whether it's a new-build, extension or re-fit, we turn plans into projects, and projects into successes. Implementing a construction project requires pragmatism. Only then will a vision take on a form – and the form that's set out in the plans. With our skills and know-how, we take every industrial plant construction project to successful end. Pragmatically.

## Process technology

First analyse, then automate: Process analysis technology (PAT) and automation technology are two sides of the same coin – and the name of that coin is “improving plant economy”. While PAT serves to gather data about material concentration, automation technology allows intelligent control systems to be designed based on the collected data. The result: reliably high product quality and the economical use of resources.

## WE KEEP YOU GOING.

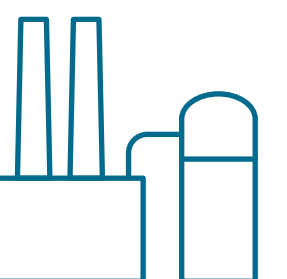

An efficient infrastructure is a prerequisite for trouble-free processes. We secure your site operations – reliably, committed, legally compliant. So that everything runs smoothly and you can concentrate fully on your core business.

### Infrastructure Services

Production plants need an efficient infrastructure, and manufacturing companies need trouble-free operations. We ensure reliable site operations so that you can concentrate fully on your core business. So all the gears mesh perfectly – and everything runs smoothly.

## Safety / Health / Environment

Health and environmental protection is not only about legal compliance. It's also about protecting staff and the general public from harm. Through fully integrated HSE management (HSE: Health, Safety, Environment), operations can be optimised for the health of people and the planet.

## Supply and disposal

Without energy sources, nothing can be moved in industry – gas, steam or compressed air and of course electricity are indispensable for most manufacturing processes. We make sure that you get everything you need in your business. Whether electricity, water, oxygen, nitrogen or natural gas: If we manage the supply, you can rest assured.

## WE IMPROVE YOUR AVAILABILITY.

With a comprehensive range of services, we optimize the availability of your plant. In doing so, we always keep an eye on the careful and efficient deployment of personnel, materials and spare parts.

### Maintenance

We take care of the most important ingredient in the recipe for industrial success: maintenance. With an extremely broad service offering that reaches from specialised maintenance tasks through to a full-service agreements, we ensure optimal plant availability. In summary: when we're undertake maintenance, technical inspections and repairs, everything runs like a well-oiled machine.

## Shutdown management

Shutdowns are just as much part of the lifecycle of an industrial facility as operating at peak capacity – forward-looking shutdown management is therefore important, too. With a shutdown concept tailored to your facility, we ensure that everything is soon running like clockwork again.
